The third edition is reorganized to facilitate the incorporation of cultural competence into a greater variety of classroom and workplace settings—supplemented with an assessment and evaluation toolkit that can be adapted for all programs. A wealth of practical information on all aspects of culturally competent communication and treatment in both the United States and the world is featured ready-to-use materials for planning, implementing, and evaluating cultural competence education strategies and other health care providers on how to provide optimal care for culturally diverse populations. It offers a systematic approach based on proven research, this textbook is a unique how-to for nursing faculty called upon to educate students, nurses, and therefore to enhance the quality of nursing care. This book applies didactics in theoretical, as well as clinical training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

In the United States, nurses make up the single largest segment of the health care workforce. At more than 3 million in number, nurses make up the single largest segment of the health care workforce. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care delivered to patients. Recognizing this unique role and responsibility of nurses, the Institute of Medicine has convened a Committee to examine the current role of nurses and the nursing profession in the health care system in order to determine how nurses could make the greatest contribution to improving the quality and safety of care delivered to patients, while at the same time calibrating the labor force to meet the needs of the nation.

The Committee, in its report, recommends that while the nation's health care workforce should increase, the number of nurses should increase more rapidly than any other segment of the health care workforce. The nursing profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree in nursing, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles—including limits on nurses' scope of practice—should be removed so that the health system can reap the full benefit of nurses' expertise.

There is a great need for qualified nurse educators in South Africa to enhance the quality of the development of student nurses, and therefore to enhance the quality of nursing care. This book applies didactics in theoretical, as well as clinical training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

importance of interprofessional education. It addresses key issues of global health with a focus on poor and vulnerable individuals—particularly women and children—and those living in areas of conflict. In addition to describing notable accomplishments toward achieving global health, the book focuses on the need for increasing access to primary care, improving clinical practice through expanded education, and engaging interdisciplinary researchers in discovery of viable solutions. The book includes the perspectives of nurses and colleagues from other disciplines in both resource-rich and resource-limited countries. References provide resources for additional study, and PowerPoint slides and a test bank for instructors accompany the text.

Suellen Breakey, PhD, RN, is assistant professor at the MGH Institute of Health Professions, in Boston, Massachusetts, where she teaches accelerated BSN students. She completed her BS in biology at Salem State University, an MSN in critical care nursing at the MGH Institute of Health Professions, and a PhD in nursing at Boston College Connell School of Nursing. Her research area is the nurse's role in treatment decision making in seriously ill adults. Her clinical interests are cardiac surgical and critical care nursing. Dr. Breakey's global nursing efforts are focused on prevention and treatment of rheumatic heart disease in resource-limited settings. She is a leader in Team Heart, a nonprofit organization that works in Rwanda. Dr. Breakey led a team that developed the teaching modules, both written materials and videos, which were translated into Kinyarwanda language for their patients. She has also organized and participated in ongoing nursing professional development.

This edition, written as South Africa moves from expensive curative health care to a more people-focused primary health-care system, highlights transitional structures and bridges the gap between past and present. Part One focuses on the Government of National Unity and population development programmes, emphasising the role of community nurses in the primary health-care system. Subsequent sections cover factors playing an important role in community nursing, including housing, urbanisation and malnutrition. In accordance with the National Health-care Plan for South Africa, prominence is given to issues such as health education and maternal and child health care. The section on communicable diseases has been updated and takes into account changes in legislation and the latest statistical information. Primary health-care problems at community level are covered in depth. Students and practitioners will benefit from the wealth of information in this new edition.

Four classic tales of adventure at sea, from the master of action and suspense, available for the first time in this e-bundle.

"San Francisco has no single landmark by which the world may identify it," according to San Francisco in the 1930s, originally published in 1940. This would surely come as a surprise to the millions who know and love the Golden Gate Bridge or recognize the Transamerica Building's pyramid. This invaluable Depression-era guide to San Francisco relates the city's history from the vantage point of the 1930s, describing its culture and highlighting the important tourist attractions of the time. David Kipen's lively introduction revisits the city's literary heritage from Bret Harte to Kenneth Rexroth, Jade Snow Wong, and Allen Ginsberg as well as its most famous landmarks and historic buildings. This rich and evocative volume, resonant with portraits of neighborhoods and districts, allows us a unique opportunity to travel back in time and savor the City by the Bay as it used to be.

Presents an anthology of novels, short stories, and essays.

Health and healthcare in South Africa attempts to capture the essence of transformation and trends in the South African health sector. It offers, on the one hand, an overview of recent and current developments in the South African health care system, and on the other, of trends in the health status of the South African population. The book is a follow-up to the well-known Health care in South Africa - structure and dynamics (Van Rensburg, Fourie & Pretorius 1992), published just before the transition to a democratic society. The book retains a strong historical thread, but the focus is generally on the nature of the transformation process, gains made and failures encountered.
